EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given via email correspondence with Nina Lee, acting for Mr. Kia Silverbrook, on 5/19/2008.

Amendments to the claims have been made as follows:

Regarding claim 1:

At the end of the claim, "so that the electrodes are non-coincident" has been changed to "so that respective associated electrodes corresponding to each heater element are non-coincident with each other."

Regarding claim 19:

At the end of the claim, "so that the electrodes are non-coincident" has been changed to "so that respective associated electrodes corresponding to each heater element are non-coincident with each other."

Regarding claim 38:

On line 11 of the claim, "so that the electrodes are non-coincident" has been changed to "so that respective associated electrodes corresponding to each heater element are non-coincident with each other".

Allowable Subject Matter

Claims 1-8, 10-22, 24-27, 29-44, and 46-54 are allowed.

Claims 1-8, 10-22, 24-27, 29-44, and 46-54 are allowable over the prior art of record, since the prior art does not disclose, teach, or suggest a printhead comprising a plurality of heater elements disposed in each of the bubble forming chambers, wherein the heater elements and associated electrodes in each bubble forming chamber are arranged so that respective associated electrodes corresponding to each heater element are non-coincident with each other. It is this combination of limitations, in combination with other features and limitations of claims 1, 19, and 38, respectively, that makes these claims allowable over the prior art of record.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Manaka (JP 62094347) disclose a plurality of heater elements (16a1, 16a2) suspended within each bubble forming chamber (Fig. 6a). However, these heater elements share the same electrodes. Manaka also discloses a plurality of elements (16a, 26a) suspended within each bubble forming chamber, wherein the associated electrodes corresponding to each element are non-coincident with each other (Fig. 26). However, one of these elements corresponds to a detection element rather than a heater element.

Examiner notes that a modification of the detection electrode would not render the claims obvious, since Examiner was unable to find sufficient motivation to provide

Art Unit: 2861

the detection element with a bubble nucleation section such as that disclosed in the currently amended claims.
